EARLY FLOWERING

GIANT "NICE"

STOCKS

Of all the varieties of Stocks, the GIANT FLOWERED "NICE" type is acknowledged the best.

By careful selection the strain we offer has been vastly improved and will, we hope, give fully 70 to 80 per cent. double blooms.

Stocks require an open position, a well drained soil, a regular but not an over-supply of water and should be treated as annuals.

Read what one of our clients writes:

"I have grown Stocks for a number of years now but have never had such a superb show as I have this season. All of them are three feet high and some even more, and the percentage of doubles is well over 70. I had more than 200 plants from a one-shilling packet of seed."

THALICTRUM

DIPTEROCARPUM

"LAVENDER SHOWER FLOWER"

This beautiful plant has only recently been acclimatised in New Zealand and Australia. It is a herbaceous Perennial, with a root and habit much like Aquilegias or Columbines. When established, it flowers most profusely in mid-summer, for several weeks. The colour is an exquisite deep lavender or pale purple, with yellow anthers. The flowers stems are 4 to 5 feet long, with an extremely graceful habit, which suggests the pretty effect of Gypsophila, with a colour similar to that of Aquilegia Coerulea, but of a rather deeper shade. Plants will flower first summer, and improve yearly. In addition to the beautiful flowers, the leaves are very pretty indeed, being very much like fronds of a large maiden hair fern. It does well in similar positions to those which suit the Aquilegias, and in fairly good soil. We consider this one of the finest plants introduced for the past decade, and the growers will be delighted with it. The other varieties are very similar in growth, but different in colour.
